

YOU ARE WHERE YOU'VE BEEN

You are where you've been

Technological threats to your location privacy

A Free Seminar
Wednesday 23 July 2008
9:00am–5:30pm
Law Theatre, Law Building (F8)

The explosive growth of location-aware computing means that individual's movements may be used to make inferences about their identity, activity and behaviour raising ethical, legal and professional issues for those involved.

This seminar organised by the [School of Surveying and Spatial Information Systems](#), UNSW and the [Cyberspace Law and Policy Centre](#), UNSW aims to address privacy issues associated with precise location information. Speakers from academia, industry and policy think-tanks would address these issues to stimulate discussion. The seminar concludes with a panel session.
